

DAC-200ts Software Information

Software versions can be downloaded on the DAC-200ts product page.

<https://www.caryaudio.com/products/dac-200ts-digital-to-analog-converter/>

Press 8521 on the remote control to verify the software version and date.

Windows 10 Compatible Driver.

Latest Update: As of June 1, 2017 all units will be shipped with their USB port updated with firmware driver version 3.40. Driver v3.40 is compatible with Windows 10 and previous Windows versions. Driver v3.40 will not work if the USB port has not been updated.

If you have a DAC-200ts with any software earlier than version 1.1 dated February 15, 2016 (1.1_2016_02_15) you should use USB Driver version 3.20.

If you have a DAC-200ts with updated USB software for DSD256 and software version 1.1 dated February 15, 2016 (1.1_2016_02_15) or later (up to the factory ship date of June 1, 2017) you should use USB driver version 3.34.

Information about updating the USB port firmware:

The USB port of your DAC-200ts must be updated in order to use driver v3.40.

To perform the update please download the package: “Instructions and Downloads for Updating USB Port for Windows 10”.

<https://www.caryaudio.com/wp-content/uploads/2017/06/Instructions-and-Downloads-for-Updating-USB-Port-for-Windows-10-Driver.zip>

If you are unsure if you have the updated USB software or have any other questions, please [contact technical support](#).

NOTE: All DAC-200ts should be updated to USB driver v3.40. The latest version of software should always be installed.
